

ABOUT US

EneServ Consultants Team designs custom energy conservation solutions for Commercial and Industrial projects. We start by examining your billing for the last twelve months and examining your Load factors and understanding your effective rates.

As EneServ Consultants we complete a comprehensive energy audit by evaluating all four energy loads; Lighting Systems & other electrical appliances, Electrical Motors, Air Conditioning & Refrigeration Systems. Based on the audit, we design a custom solution that will generate real savings. These savings are backed by a written guarantee to ensure that your company is truly benefiting from the savings.

The installation of the custom solution has a very low impact on your facility's ongoing operations. The savings range from 10% to 35% of your electrical bill.

CUSTOM SOLUTIONS

Step 1 – Survey - After an initial survey of your facility we will give you a savings Estimate.

Step 2 – Audit - Our comprehensive energy audit begins with collecting and analyzing your 12 month utility bills. We will map all electrical loads and areas of improvement that can be addressed by our Technologies to reduce monthly costs while maintaining normal operations. We will assess your consumption with your demands to determine how to maximize your electrical usage & savings.

Step 3 – Planning - Through critical analysis of the power audit, we will recommend most effective technologies to improve your efficiency while keeping same capabilities. A written guarantee is issued for specific savings to be realized in specific time period.

Step 4 – Implementation & Follow-up - An EneServ contractor will install your project, with no additional burden on your already overworked Engineering or Maintenance staff. We will also ask for the post completion 12 months utility bill to make sure the desired result is achieved.

TECHNOLOGY

EneServ's technologies address all major energy loads for inefficiencies and wastage. These products increase energy efficiency and savings while the equipment is running. The technologies are low-cost, low-impact, and custom designed.

1. Lighting Systems – State-of-the-art Industrial Lighting and Lighting Controllers & other modalities.
2. Electrical Motors - Power Correction Systems, Harmonic Filtering Systems, Motor efficiency Controllers, Etc.
3. Air Conditioning Systems - Efficiency Controllers, Dewpoint Controllers, Condenser Coil Optimizers, Radiant Barriers & Computerized Digital Process Controllers.
4. Refrigeration Systems - Refrigeration Enhancement Systems to include Cycle Controllers, Condenser Coil Optimizers, & Computerized Digital Process Controllers.

We will always match technologies to your specific needs.

INDUSTRIES WE SERVE

If you have Electric Bills over \$100,000.00/yr we can assist you.

Typical businesses that employ our services:

- ◆ Auto Dealers
- ◆ Refrigerated & Non-refrigerated Warehouses
- ◆ Manufacturing Facilities & Food Industry
- ◆ Grocery Stores & Supermarkets
- ◆ Casinos
- ◆ College & University Campuses
- ◆ High-rise Apartment Buildings & Hotel/Motels
- ◆ Municipality Buildings and Civic Centers.
- ◆ Restaurants
